Presentation

Software Engineering student with honours in Software Architecture. Specialising in the development of secure solution. Proactive and problem-solving oriented, with technical expertise in Python and Docker environments, focused on delivering efficiency and technical quality within innovative development teams.

Education

Bachelor's degree in software engineering

University of Oviedo | 2022 - Present

- GPA: 7,303 – Honours in Software Architecture
- Elective course of Computer Forensics and Auditing

Experience

Software Engineering Intern | Indra ATM, iTEC & Internal Solutions

Gijón, Spain | 2026 – Present

- **Support for project management using agile methodologies**
- **Tracking and monitoring of milestones:** Use of professional tools such as Jira to monitor task progress and ensure that deadlines are met.
- **Cross-departmental communication:** Collaboration in managing communication between the technical team and various stakeholders to facilitate workflow.
- **Process documentation:** Preparation and updating of progress reports and technical documentation required for the software delivery lifecycle.
- **Workflow optimisation:** Learning and applying performance metrics to identify bottlenecks.

Abilities

Programming Languages: Python, Java, JavaScript, Bash, SQL.

Tools: Docker, Git, Linux, MongoDB.

Soft Skills: teamwork, leadership, adaptability.

Languages:

- Spanish: Native
- English: Advanced (Cambridge B2)
- French: Basic

Driving License.

Certifications

Web Development Course: University of Oviedo – TalentUO, 150h, 2024

Artificial Intelligence and Productivity: Google, 8h, 2024

National Security Scheme Course: ENS, 20h, 2025

Projects

All projects are included on my personal website: <https://martinezfuentesadrian-dev.vercel.app/es>

WiChat – Real-time Multiplayer Quiz Platform

- Architected and developed a high-concurrency web application inspired by the TV show "Saber y Ganar," applying principles of Software Architecture (honours received).
- Implemented real-time multiplayer functionality, leaderboards, and category-based timed challenges to enhance user engagement and competitive gameplay.
- Focused on scalability and secure solutions, ensuring efficient data handling and smooth user experience during peak traffic.
- Link: https://github.com/Arquisoft/wichat_en2b.git

Compiler Design – Full Language Pipeline

- Developed a complete compiler from scratch using Java, covering the entire translation pipeline: lexical, syntactic, and semantic analysis.
- Engineered the code generation phase to translate high-level logic into executable instructions, demonstrating deep knowledge of Programming Languages and logic structures.
- Optimized error handling and reporting during the analysis phases to improve the developer experience and debugging efficiency.
- Link: <https://github.com/adrianmfuentes/DLP>

Custom DBMS – Database Management System

- Engineered a Database Management System (DBMS) from the ground up using C++, focusing on low-level memory management and data persistence.
- Implemented core features including SQL-like basic queries, robust data storage, and index optimization to ensure high-performance data retrieval.
- Applied problem-solving skills to handle complex data structures, ensuring system stability and technical quality.
- Link: <https://github.com/adrianmfuentes/SGDB>
