Presentación

I am currently in my fourth year of a degree in Software Engineering. So far, I have completed the entire degree in its bilingual format.

I have experience in academic projects, working in many teams and following different agile working methodologies, such as SCRUM.

Education

Bachelor's Degree in Software Engineering (2022 – Actualidad)

[Universidad de Oviedo](#)

Abilities

Programming languages: Python, Java, JavaScript/Typescript, C++, C#, Bash, SQL

Frameworks/Tools: React, NodeJS, Docker, Git, Linux, MySQL, PostgreSQL, MongoDB

Knowledge: engineering, intelligent systems, cybersecurity, cloud computing

Languages: Spanish (Native), English (Advanced), French (Basic)

Soft Skills: teamwork, leadership, adaptability, and a desire to learn and continuously improve

Courses & Certifications

- [Web Development Certification](#) from the University of Oviedo, 2024
- B2 English Certification from Cambridge, 2022
- Certification in the National Security Scheme, 2025

Projects

All completed projects are included in the portfolio on my personal website:

<https://martinezfuentesadrian-dev.vercel.app/es>

Project:

WiChat - Quiz-style gaming platform

- Development of a quiz-style web application inspired by the television programme “Saber y Ganar”. The platform offers real-time multiplayer gaming, timed challenges, leaderboards, and different question categories.

Project:

DLP - Building a compiler from scratch

- Developing a compiler from scratch using Java. Includes lexical and syntactic analysis and code generation.

Project:

Database Management System

- Implementation from scratch of a database management system (DBMS) using C++. Includes features such as basic queries, data storage, and index optimisation.

Project:

URL shortener

- Web application that allows users to shorten long URLs. Developed with Spring and MongoDB.

Project

HTTP server

- Implementation of a basic HTTP server capable of handling GET and POST requests, serving static files, and processing forms.
